

Analytical Services

- ▶ High Content Imaging
- ▶ Fluorescent Microscopy
- ▶ Digital PCR
- ▶ Flow Cytometry
- ▶ Experimental Design Consultation
- ▶ Data Analytics

Agathos now has a full line of analytical testing

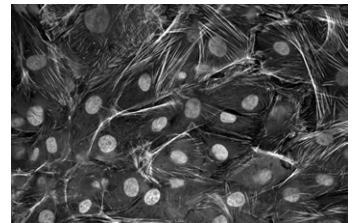

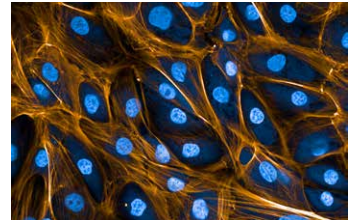

At Agathos, we know every experiment matters. That is why we are offering a full line of analytical testing and scientific consulting. From single experiments to ongoing studies, our scientific team is here to meet your needs.

High Content Imaging

The Future of Cell Analysis

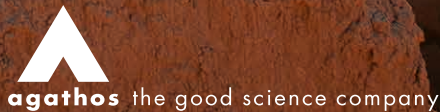

Are you looking for a more efficient and accurate way to analyze your biological samples?

Look no further than Agathos Biologics and our state-of-the-art high content imaging services. Our high content imaging technology allows us to capture and analyze multiple parameters within a cell, providing a more comprehensive understanding of your samples. This saves you time and resources and allows for accurate and reliable data. Our experienced scientists will work closely with you to design and execute the best imaging experiments to meet your research needs. We offer a variety of imaging applications, including immunohistochemistry, immunofluorescence, and signaling pathways.

Fluorescence (top) and digital phase contrast (bottom) images of sheep kidney cells

Speed and accuracy are paramount to our analytical services. We strive to operate at **The Speed of Biology™**, delivering reliable results as quickly as biology allows.

Flow Cytometry

Discover your Cells through Fluorescence

We pride ourselves on offering exceptional flow cytometry services that are both dependable and of the highest quality. We are equipped with the latest technology and our team of experienced scientists are dedicated to providing you with the results you need. Our services are designed to be fast, efficient and flexible. Agathos is here to support you at every stage of your research, whether you are in the early planning phase or ready to send us your samples.

Digital PCR

Precise. Sensitive. Accurate.

We use the latest digital PCR (dPCR) technology to deliver unparalleled sensitivity and precision in nucleic acid quantification. dPCR provides absolute measurement, allowing for direct comparison of results between different samples without the need for a reference standard. The high precision of dPCR enables reliable and reproducible results, even in samples at low concentrations. You can have confidence in your results by choosing Agathos for your dPCR needs.

Contact us today to learn more about how we can help you achieve your research goals.
